

2-PART SYRINGES

2-Part All Plastic Syringes

Norm-Ject[®] and Henke-Ject[®] syringes are latex free, contain no rubber, silicone oil, styrene, BPA, or DEHP. These syringes are the choice for any situation needing an inert, non-reactive syringe. Because of their purity, these syringes have found a wide range of specialty applications including IVF, embryo-transfer, chromatography, and many laboratory procedures. Manufactured only from laboratory grade polypropylene and polyethylene, these unique plastic syringes have a positive safety stop to help prevent accidental spills. These 2-part syringes are individually sterile strip packed and are also available in bulk, unsterile packaging.

Conventional Rubber Tip Syringes

Although in general use for medical injections, rubber tipped disposable syringes have several drawbacks compared to the Norm-Ject[®] and Heke-Ject[®] all plastic syringes. Since they contain natural or synthetic rubber and silicone oil, they may contaminate any media exposed to the syringe. Adverse effects from rubber curing agents, which contain zinc, sulfur and other elements, have been observed on everything from chromatographs to in-vitro procedures. Synthetic rubber plungers are also much more reactive to organic solvents and the silicone oil can cause separation of emulsions. In short, your best choices are the Norm-Ject[®] and Heke-Ject[®] syringes if you are interested in purity and accuracy.
