

Cost + Injectable Product Savings:

Air-Tite *Aesthetics*

THE INViSIBLE NEEDLE™ and other Low Dead Space (LDS) Needles by TSK available now from Air-Tite Aesthetics!

Air-Tite Aesthetics proudly announces the arrival of the highly anticipated U.S. release of **THE INViSIBLE NEEDLE™** and the **Low Dead Space (LDS)** hub needles from TSK Laboratory.

THE INViSIBLE NEEDLE™ is TSK's thinnest needle to date, with an outside diameter of just 0.2mm. It is 33% thinner than the popular TSK 30G needles, which may result in a more comfortable injection experience for the patient with possibly less pain, less swelling, and less bruising. THE INViSIBLE NEEDLE™ features the new Low Dead Space needle hub.

The Low Dead Space (LDS) needle's design reduces the excess effective hub space to nearly ZERO, which may result in a potential cost and product savings as it leaves behind so little of the unused precious injectables.
