An Innovative Device for Applying Medical Products Safely and Accurately

CuraCator™

THE NEW STANDARD OF CARE

The CuraCator™ has revolutionized the way products should be applied and has become the new standard of care by providing safe, controlled, sterile application of products to skin. The CuraCator™ was designed and developed by Dr. Janine Hopkins, board-certified dermatologist, and is a Class 1 FDA registered medical device accessory. The CuraCator™ connects to any luer lock syringe, but is recommended to be used with a 3mL syringe or smaller. The CuraCator™ underwent fluid physics studies and has been proven to allow for the flow of products of differing viscosities including various liquids, gels, ointments, and creams.

Current techniques used to apply PRP, exosomes, serums, and other products after skin procedures are extremely uncontrolled, wasteful, and dangerous.

Dispersing these products with an unsterile gloved hand can lead to contamination or adulteration of the product, increasing the potential for infections of the freshly wounded skin. The CuraCator™ addresses all of the issues related to both the application and spreading of product.

Order the CuraCator™ to modernize your practice and provide your patients with the new standard of care!

HYPODERMIC NEEDLES

TSK LOW DEAD SPACE NEEDLES

The Low Dead Space (LDS) hub on these premium hypodermic needles was designed to nearly eliminate product loss due to dead space typically seen in a conventional needle hub, which may result in significant cost savings. LDS Needles feature a hard polymer hub to help prevent flexing and pop-off, external hub threading to reduce risk of leaks, and TSKiD™ enlarged inner diameters requiring less extrusion force.

SIZES:	PART #:
30g x 9mm	TSK3009LDS
30g x 13mm	TSK3013LDS
33g x 9mm	TSK3309LDS
33g x 13mm	TSK3313LDS
0.2mm x 9mm (THE INVISIBLE NEEDLE)	TSK02009LDS

TSK THE INVISIBLE NEEDLE™

Featuring the low dead space needle hub, THE INVISIBLE NEEDLE™ is the smallest TSK needle to date. At just 0.2mm in diameter, it is thinner than even a 33G needle. THE INVISIBLE NEEDLE™ may provide a more comfortable injection experience, while potentially reducing the risk of bruising and bleeding for patients.

TSK STERiJECT™ NEEDLES

Premium hypodermic needles with a sharper point. TSK STERiJECT™ needles have TSKiD™ enlarged inner diameters to allow for a better flow rate than traditional needles.

OTHER OPTIONS

We carry various other hypodermic needle brands including: JBP, EXEL International, BD, EZ FLO, and Henke-Ject to meet various size and cost needs.

LOW DEAD SPACE SYRINGES

Low Dead Spaces Syringes feature an elongated plunger tip that extends all the way to the tip of barrel to reduce dead space within the syringe. This helps to reduce potential waste of highly valuable injectable products. All of our low dead space syringes are available in 1ml options and feature a positive plunger stop to help prevent accidental withdraw.

AND MORE

MINI05

PRECISE DOSING
MINIMAL PRODUCT LOSS
EXCHANGE NEEDLES
REDUCE NEEDLE POP-OFF

 SUPPORT BREAST CANCER FOUNDATIONS 

The MinimLL syringe is the newest addition to the Air-Tite Products portfolio of specialty medical supplies. Created due to market feedback from clinicians who saw a need for very specific features, we are excited to introduce this first option of a less-than-1mL, Luer Lock syringe.

Features include:

- Easy to read 0.01 mL graduations for precise dosing of the smallest volumes
- Low Dead Space Plunger Tip allows for minimal residual volume
- Luer Lock Barrel Tip lowers the risk of needle pop-off
- Pink Plunger indicates a percentage of our sales will be donated to breast cancer research and awareness programs

MinimLL Syringes are manufactured with Polypropylene, which has a long history of use in various medical devices and is considered a safe vessel for most uses. The low dead space (LDS) feature minimizes loss of material, and can be combined with low dead space needles for additional product savings. In addition to helping reduce needle pop-off, the luer lock mechanism allows for the exchange of needle (such as using a large gauge needle for draw-up and a fine gauge for injection).

Air-Tite's line of Pink products contribute a share of the sales to Breast Cancer Research and Awareness Programs. Other products include Pink Gloves, Pink Masks, & Ice-Sticks.

PREMIUM MICROCANNULA

TSK STERiGLIDE™

STERiGLIDE™ cannulas are the premium aesthetic microcannula option. These second-generation cannulas were manufactured specifically with aesthetic injections in mind. Featuring a superior tip design with improved cannula flexibility, STERiGLIDE™ offers optimal control and precision. The beveled port and proprietary surface treatment makes for a smooth glide, minimizing catching or snagging. These ultra-thin wall cannulas provide increased product flow, requiring less extrusion force. The side port marking on the safety hub and the nearest-to-tip port allows for more accurate filler placement. Introducer pilot needles are included in a safe and convenient hard-shell capsule. 20 cannulas and 20 pilot needles per box.

TAPERED DOME SHAPED TIP DESIGN

- Easier Cannula Introduction
- Maneuver Through Anatomy Easier

PROPRIETARY SURFACE TREATMENT

- Better Gliding
- Reduced Patient Discomfort
- Improves Tactile Sensitivity

NEAREST-TO-TIP DELIVERY

- More Accurate Placement
- Reduced Product Loss

CLEAR SIDE-PORT MARKING

- Better Handling
- More Accurate Placement

MICROCANNULAS

TSK CSH CANNULA

Your traditional microcannula, only better. TSK's line of STERiJECT CSH Cannulas are a competitively priced, high quality, standard microcannula option. CSH Cannulas are manufactured with ultra-thin wall technology for an enlarged inner diameter. This feature provides a better flow rate and requires less extrusion force in comparison to regular cannulas, for smooth administration. Their traditional rounded, blunt closed-tip shape allows for familiar handling. Cannulas provide the ability to treat a larger area with only one injection point, improving patient comfort. These are great for anyone looking for a budget-friendly option that still offers reduced risk of trauma on injection. CSH Cannulas offer more per box, with 25 microcannulas individually packaged in secure, hard-shell capsules. CSH Cannulas are made of surgical stainless steel.

**Value Priced Flexible Aesthetic Cannula by TSK
35% Less Force Needed**

TSK TSK NEEDLE HOLDER

Safely secures the hard-shell plastic capsules of cannulas and needles for safer loading and removal from the syringe. The solid weight of the needle holder and its firm grip of the needle safety capsule make a clean and organized storing place for your needle and syringe during your treatment.

- Helps Avoid Needle Stick Injury
- Clean and Organized
- Safe Needle Storing and Assembly

TSKNH1

Air-Tite *Aesthetics* ICE-STICK

Ice-Cold Cartridge with refreshing aluminum head to cool areas of the face and body. The outer shell casing allows for a comfortable hold and the faceplate does not drip like your common ice pack. This reusable ice-stick can be sanitized and stored in the freezer. Great for numbing sensitive areas pre-treatment and reduce puffiness, redness, swelling, and itching afterwards. *Air-Tite donates a portion of Ice-Stick sales towards breast cancer research and awareness programs.*

- Helpful prior to injection for pain reduction
- Reduce the risk of hematomas
- Stays cold for 40 minutes or longer

ICESTICK

IMI SYRINGE CONNECTORS

Cost-effective high quality connectors manufactured in the USA. These syringe connectors have been used for various applications, such as compounding, fat grafting, and connecting drug delivery devices.

- Large finger grips**—Helps protect against touch contamination and allows for secure manipulation
- Reduced product waste**—Only an estimated 0.07mL of fluid loss during transfer
- Drip tray design**—The built-in drip tray design catches stray fluid droplets
- Individual sterile packaging**—Facilitates aseptic technique

EXEL^{INT} FIXED NEEDLE INSULIN SYRINGES

Exel International is known for unsurpassed quality at a low price. These fixed-needle syringes are latex free, sterile, non-pyrogenic and non-toxic. The design includes bold printing, clear graduations, and siliconized gaskets for smooth consistent plunger motion and a positive plunger stop. The fixed needle allows for reduced dead space to minimize product waste and feature an auto ground needle tip for greater comfort.

SIZES:	PART #:
3/10cc x 30G x 5/16"	EU03308
3/10cc x 31G x 5/16"	EU03318

1cc x 30G x 5/16"	EU1308

Other configurations available including 1/2" in 28g / 29g

NeuBlush PINK NITRILE GLOVES

Air-Tite donates 5% of our NeuBlush Powder-Free Nitrile Exam Gloves sales towards breast cancer research and awareness programs. The manufacturer of these gloves donates an additional 5% of their NeuBlush profits towards these programs. Together, we can help find a cure.

NeuBlush Nitrile Exam Gloves provide outstanding tactile sensitivity for touch perception and protect hands from potentially infectious materials. They offer a soft and comfortable feel and are far more resistant to punctures and tears than either latex or vinyl.

- Helps deliver savings over most other nitrile exam gloves
- Offer excellent sensitivity for touch perception and dependable protection
- Made from Synthetic Nitrile Polymer and contains no natural latex rubber
- Packaged in boxes of 200

MARKING PENCILS

Aesthetic marking pencils are essential for any aesthetician to have in their kit in order to mark areas of interest.

White cosmetic wax pencils have been used for marking prior to non-surgical aesthetic procedures and during consultations as the coloring can be easily removed. Our marking pencils are uniquely designed to come off clean with an alcohol swab. Air-Tite Aesthetic Marking Pencils provide clear visibility within offices and examination areas. These are softer than the traditional wax pencil, yet not so fragile that the tip breaks easily.

They glide with ease and provide smooth coloring with one stroke for delicate marking.
