

Cost + Injectable Products Savings:

THE INVISIBLE NEEDLE™ and LDS Needles by TSK coming soon from Air-Tite Aesthetics!

Air-Tite Aesthetics proudly announces this summer's highly anticipated U.S. release of **THE INVISIBLE NEEDLE** and the **LDS (Low Dead Space)** hub needles from TSK Lab.

The INVISIBLE NEEDLE is TSK's thinnest LDS needle to date with a 0.2mm outside diameter. It is 33% thinner than the popular TSK 30G needles, which may result in a more comfortable injection experience for the patient with possibly less pain, less swelling, and less bruising.

The LDS (Low Dead Space) needle's design reduces the excess effective hub space to nearly ZERO, which may result in a potential cost and product savings because it leaves behind so little of the unused precious injectables.

Contact Air-Tite at (800) 231-7762 or visit www.air-tite.com to place your order when these needles become available in summer 2021.
